

Application procedure Quality mark

If you want to qualify for the quality mark, you must follow these steps:

1. Only CAN members can apply for the quality mark. Register if you are not yet a member. Information on the membership can be found [here](#).
2. The application for the quality mark can only be done for products with an [industry standard](#). Check if your product complies with all the requirements.
3. Download the agreement for use of the quality mark. The agreement can be found in the [members section](#) of the website. Date, sign, scan and send to: info@cannabinoïdenadviesbureau.nl.
4. The CAN then registers you at Novatrace. Novatrace will contact you to schedule a course so that you can learn to work with the traceability system.
5. Send the artwork of the relevant products to: info@cannabinoïdenadviesbureau.nl. The artwork will be checked against the labelling requirements stated in the industry standard. After approval you will receive the logo¹ for inclusion in the artwork.
6. Simultaneously to the artwork process, all data of a product batch are entered into the traceability system. After these have been entered and the final product is traced back to the starting material, the assessor of CAN receives the analytical results from Novatrace.
7. CAN records its findings in the Certification report. If the batch is approved, the quality mark may be used and the Certification Report is uploaded into the traceability system. If the batch is rejected, you will receive a message about this and the certification mark may not be used on the artwork.
8. All submitted batches are published on [Cancheck](#). Novatrace will contact you before publication of the first batch to fine-tune the entries with you.

¹ The logo/mark should have a minimum diameter of 10 mm.
